

**Providing the Aftermarket with Automotive Braking Solutions**

# Intimidator

**Intimidating the Competition**

- **Semi-Metallic Formula**

An asbestos-free, semi-metallic composite provides consistent quality and performance. Excellence wear and fade characteristics are evident, while maximizing rotor life.

- **Dampening Materials**

On most of the popular applications, we have begun to offer a constraint-layered shim, thus reducing some of the vibration that can cause braking noise. With some friction slotting and chamfering where applicable, INTIMIDATOR can provide quiet stopping.
